

# The Business Council Platform, *module by module.*

A white-label network for business communities: membership, referrals and deal-flow in one app, with a full back office behind it. This dossier covers everything currently built.

**Platform** iOS · Android · Web

**Status** In active development

**Live deployment** Curated Table

**Prepared** 7 September 2026

9

Product modules shipped

5

Stages in the profile approval pipeline

43+

Industries in the self-growing catalogue

185

Cities mapped across 36 states & UTs

## WHY COMMUNITIES CHOOSE IT

**Business gets done between members — the platform just gets out of the way.**

Nine reasons a business owner opens it again after the first week, in the order they usually discover them.

01

### New connections

Meet business owners outside your existing network, chapter by chapter.

02

### New leads

Referrals move member to member — warmer than any cold list.

03

### Cross-industry exposure

A post reaches every chapter, not only members in your own trade.

04

### In-app messaging

Talk to a fellow member the moment you connect — no numbers to exchange first.

05

### Real-time notifications

Know the instant a meeting's booked, a referral lands, or a deal closes.

06

### One-to-one meetings

Schedule a 1-to-1 with any member, and log the agenda and minutes together.

07

### Share the win

Post a requirement, an announcement, or a deal just closed, for the whole community to see.

08

### A profile worth referring

Basic details plus the business specifics — GST, turnover, industry — that make a member worth recommending.

09

### Show up at events

Register for the community's upcoming summits, conclaves and chapter meets.

## HOW IT'S BUILT

01 Sign-In & Account Security

03 Photos & Documents

05 Chapters & Member Directory

07 Messages, Events & Digital Card

09 Smart Data Catalogues

02 Business Profile & Onboarding

04 Home Feed & Business Posts

06 Business Desk — Deals & Referrals

08 Admin Console

## READING THIS

Each module below is something a member or administrator can already do today — not a proposal. Where it's useful we've named the exact mechanics: what a field requires, what an email triggers, what an admin sees.

The build has two halves that work together: **the member app**, carried in a member's pocket under whichever community's name it's deployed as, and **the back office** — the admin console and the server behind it, covered from Module 08 onward. “Council,” “chapter” and “1-to-1” are the platform's own working vocabulary; a community is free to relabel them in its own branding, as Curated Table has.

# 01

ACCESS

## Sign-In & Account Security

*The front door — and what happens when it's the first time.*

- Members sign in with their **email or phone number and password** against the live member directory; the session token is held in the device's encrypted keychain, not in plain storage.
- **Forgot password** sends a 6-digit code by email, valid for two minutes, with a resend timer — verifying the code unlocks a new-password step, and a confirmation email goes out the moment it's changed.
- When an administrator creates a member, that account starts **unverified**. Its first sign-in redirects to email verification instead of failing outright, and once verified the member chooses to keep the administrator's password or set their own, in the same flow.
- An unverified or incomplete account is always told exactly what's missing and what to do next — never a dead end.

## 02

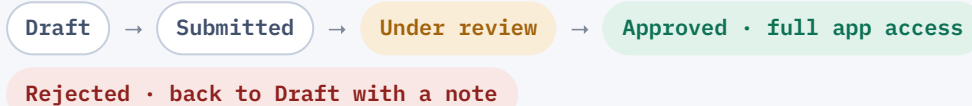

### ONBOARDING

## Business Profile & Onboarding

*The membership record every member completes before they get the keys.*

- One profile per member, held apart from their login: **designation, company, industry, State → City, GST number, annual turnover, bio, office address, website** and supporting documents.
- A live **completion meter** tracks progress as the member types, distinguishing what's required to submit from what's simply encouraged (a photo and cover image count toward the score but never block submission).
- Industry and City are typed into a search box that offers existing entries first and lets the member add their own if it's genuinely missing — see Module 09.
- Submitting hands the profile to the council for review. The member sees exactly where it stands at every stage, and a rejection comes back with the reviewer's note attached, ready to fix and resend.

#### APPROVAL PIPELINE

Until a profile is **Approved**, the member sees only the onboarding screen — administrators are exempt so the council can keep working the queue.

## 03

### MEDIA

## Photos & Documents

*Uploads that stay tidy on the way in and never break on the way out.*

- A member **crops their own photo** — drag to reposition, pinch or use the on-screen zoom — inside a 1:1 frame for a profile picture or 16:9 for a cover image, before anything uploads.
- Confirming closes the crop screen immediately and shows a live **upload percentage** right on the photo circle, so the member is never staring at a spinner-only screen.
- Files are compressed and normalised automatically and stored one folder per member, so a photo taken on any phone loads correctly on every screen.
- Tapping an existing photo opens **View, Change or Remove** — removing a photo deletes the stored file itself, not just the profile's reference to it.
- No photo yet? The member's **initials** stand in for a picture and their **name** stands in for a cover banner, so the app never shows a broken image.

---

## 04

HOME

### Home Feed & Business Posts

*What a member sees first, every time they open the app.*

- A feed of member posts tagged **B2B Requirement**, **Deal Won**, **Partnership Ask**, **General** or **Event Highlight**, filterable by tag with one tap.
- A story-style status carousel at the top, an executive **KPI dashboard** summarising the member's own numbers, and quick-action shortcuts into the tasks used most.
- Pull-to-refresh and skeleton placeholders throughout, so the feed never feels stalled while it loads.

---

## 05

NETWORK

### Chapters & Member Directory

*Finding the right room, and the right person in it.*

- Regional chapters and industry special-interest groups a member can browse, view details for, and join.
- A searchable **member directory** for locating a specific business or business owner across every chapter.

---

## 06

BUSINESS

### Business Desk — Deals & Referrals

*The council's actual purpose: business changing hands between members.*

- Log a **1-to-1 meeting** with another member — date, time, location, agenda — and mark it completed with minutes afterward.
- Give a **referral** to a member on a client's behalf, with contact details, urgency and an estimated value.
- Record a **closed deal** between members, its value and how the introduction happened.
- A meeting-summary log for chapter-wide meetings, and a personal ledger of the member's own referrals, deals and 1-to-1 history.

---

## 07

CONNECT

### Messages, Events & Digital Card

*Staying in touch — and showing up — in and out of the app.*

- Direct **message threads** between members.
- An in-app **notification centre** for meeting invites, referrals and deals as they happen.
- An **events calendar** — conclaves, chapter meets and masterclasses — a member registers for with one tap, with a running attendee count.
- A **digital visiting card** with a scannable QR code — a member's business card that never runs out.

## Admin Console

BACK OFFICE

*A separate module, visible only to the council's own administrators.*

- Reached from its own menu and gated by role — an ordinary member never knows it exists.
- **Members:** search, create with a starting password and role, edit, deactivate, and delete one or several at once.
- **Roles:** define roles and permissions, see how many members hold each one, and a role in active use can't be deleted by mistake.
- **Pending Verifications:** confirm a member's email by hand when needed.
- **Profile Reviews:** open a submitted business profile in full and **approve**, **reject with a reason**, or mark it **under review** — the member is emailed the outcome automatically.

## Smart Data Catalogues

DATA

*Reference lists that get better the more the council uses them.*

- Both fields below are **search-as-you-type**: start typing and matching entries appear within a quarter-second, ranked by how often each one is actually chosen.
- Type something that isn't listed yet, and it's added on the spot — the next member to type the same thing finds it already there.

### INDUSTRY

**43+** curated, growing

From Industrial Automation to IT Services — a single searchable list shared by every member's profile.

### STATE → CITY

**36** states/UTs • **185** cities

Choosing a state filters the city list to match — every Indian state and union territory, seeded from Kolkata outward.

### UNDER THE HOOD

#### Mobile app

React Native on Expo, written in TypeScript — one codebase for iOS, Android and web.

Expo SDK 57

#### Media storage

Every photo and document is optimised on upload and kept in its own folder per member.

Cloudinary

#### Server

Node.js and Express over MongoDB, with a token-based session for every request.

REST API

JWT

#### Notifications

Transactional email fires at every account and review milestone — no member is left guessing.

Verification

Reset
